EDUCATION

National University of Singapore

B.Comp, Computer Science

Singapore

Aug 2025

The University Of British Columbia (Transferred out)

B.Com, Sauder School of Business, Business and Computer Science

BC, Canada

Sep 2024 – May 2025

- o **Scholarship:** Outstanding International Student Award (CAD \$15,000)
- o **Dean's List:** 2024/2025

EXPERIENCE

Globalway Japan

Software Developer

Tokyo, Japan

Jun 2026 – Present

- Building enterprise integration solutions on MuleSoft Anypoint Platform, implementing API-led connectivity pipelines to automate data synchronization across Salesforce CRM and downstream business systems
- Developing AI-powered integration workflows by embedding LLM API calls within MuleSoft flows to automate business processes and reduce manual data handling overhead

Google Developer Group @ NUS

Software Developer

Singapore

Sep 2025 – May 2026

- Built a volunteer-management platform with Node.js for SiloamXperience, enabling 30+ staff and volunteers to coordinate outreach activities and reducing manual scheduling time by 40%.
- Collaborating cross-functionally developers using Agile methodologies to implement GitHub Actions CI/CD pipelines, automating testing and deployment to AWS Lightsail infrastructure, reducing deployment time by 60%

PROJECTS

TokenWatch – AI Agent Token Analytics CLI

Project Lead

Singapore

May 2026

- Built a local-first open source TypeScript CLI tool for real-time token usage and cost analytics across Claude Code and Codex CLI sessions, parsing JSONL and SQLite storage with zero network calls — achieved close to 400 clones in a week through organic developer adoption
- Engineered a live Ink terminal dashboard with multi-view navigation (prompts, models, stats), configurable budget tracking with alerts, AI topic auto-classification, and Markdown/CSV/JSON report export

StudentHub – Personal Student Assistant

Project Lead

Singapore

Mar 2026

- Architected a horizontally scalable, cloud-native, multi-tenant SaaS platform on AWS EC2 with a Next.js frontend and containerized Node.js backend, behind Nginx with HTTPS termination designed to support 1000+ concurrent users
- Engineered a fault-tolerant, event-driven distributed backend using BullMQ/Redis for idempotent async job processing with exponential backoff, rate limiting, and queue partitioning — sustaining 99.6% job success rate at 350+ jobs/min

AutoReach – AI Social Media Automation

Project Lead

Singapore

Oct 2025

- Architected a scalable multi-tenant SaaS platform enabling social media managers to streamline content creation and scheduling across multiple accounts through AI-powered workflows, supporting automated posts weekly
- Engineered secure authentication with Clerk and implemented efficient client-side state management using Redux Toolkit and React Query for real-time data synchronization across concurrent user workflows
- Integrated OpenAI API for content generation and Instagram Graph API to automate post scheduling and bulk operations, reducing manual content management time.

Others

Hackathons: nwHacks 2025, AIE hackathon, Ralphathon

Jobs: NUS Orbital 2026 student helper - Next.js Web Development Workshop
